0 Crank	Up to 21mm Thick Door
8 Crank	Up to 21mm Thick Door
16 Crank	Up to 21mm Thick Door

- Soft Close Full Overlay Hinges with Installation Screws
- Overlay: Full, Opening Angle: 105 Degree, Closing Type: Soft Closing, Adjustment: 3-Cam Vertical, Horizontal and Depth adjustment. These are the main specifications of our hinges.
- These hinges will have a straight arm and it allows your cupboard door edge to be completely in line with the edge of your cabinet. One major advantage of a full overlay concealed hinge is that it is fully adjustable due to three little screws that they have.
- The soft closing function is one of the best indicators of the quality of the hinges. The soft closing feature prevents all disturbing noises from the kitchen and extends the lifetime of the doors, cabinets, and hinges.
- The clip-on hinge is the easiest and quickest to fit, without any tools. It is ideal for doors requiring multiple hinges to be fitted this is because you simply line the hinge up with the mounting plate and push it on in one simple movement, it will then clip on to be connected to your mounting plate. They require very little alignment and make the job much easier when you have a few hinges to fit.
